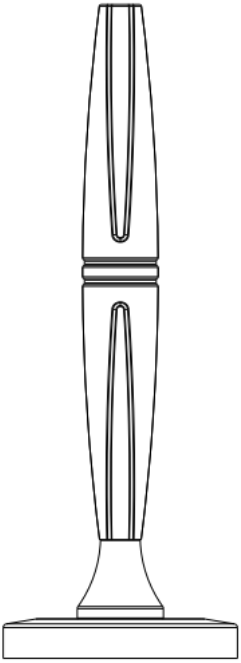
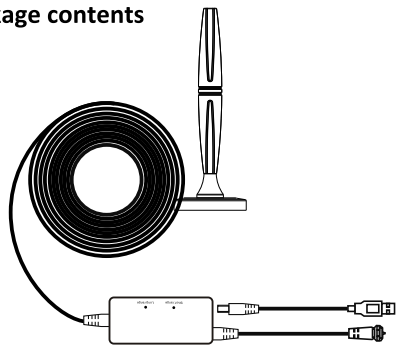
Digital HDTV Antenna

ZDK-Antenna-FY



MADE IN CHINA

Package contents

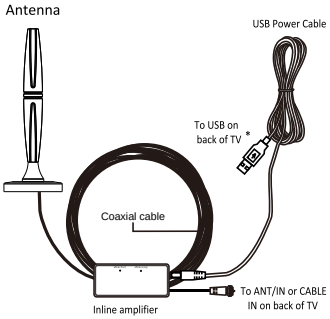


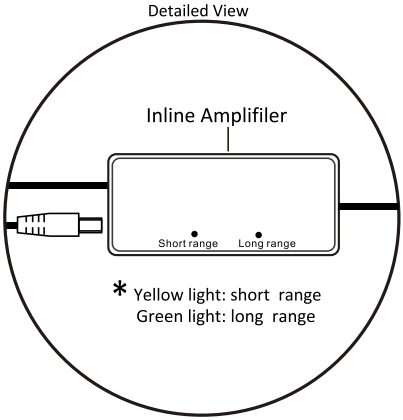
Product Information

1. Frequency range: VHF 170-230Mhz; UHF 470-862Mhz
2. VSWR: ≦2.0:1
3. Impedance:75 Ω
4. Gain:25dBi
5.Connector:F Male or Customized
6.Power supply:USB port(5V/500mA)
7.Cable length:5M
8.Polarization:Horizontal/Vertical

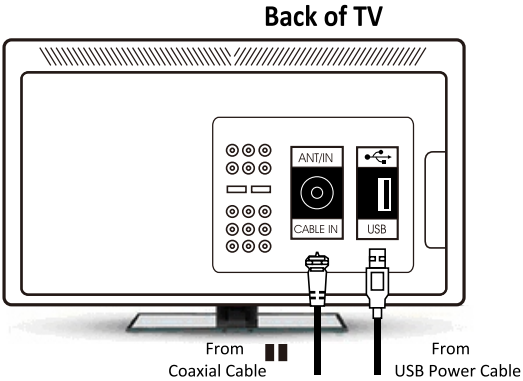
1.Connect Antenna to TV or Set-top Box

A.Before your connection,please read the below names and use for antenna parts.

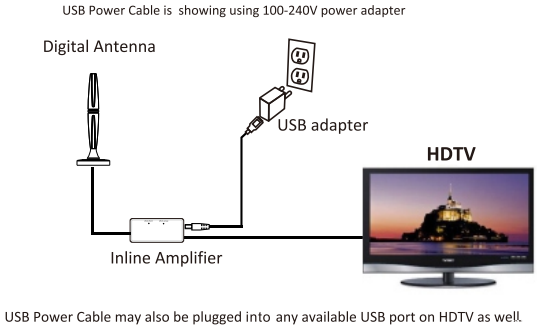




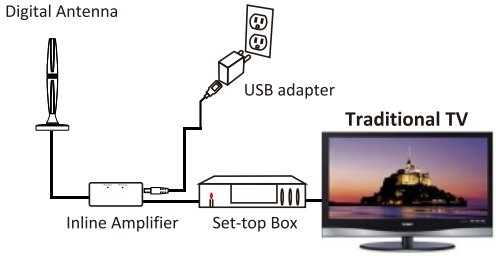
B.Connect the coaxial cable from the antenna to the ANT/IN or CABLE IN port in the back of your TV. Note: For TV 's that require a tuner box, connect the coaxial cable from the antenna to the tuner box 's ANT/IN or CABLE IN port. See the "Final Configuration" below both connection options.



Final configuration when connected to the HDTV with built in digital tuner.



Final configuration when connected through a digital set-top box



2. Mount the antenna

Find a convenient indoor location to mount your antenna, before final mounting, first test your selected antenna location by scanning for channels. In some instances, you may decide to relocated the antenna for better reception.

3. Scan the TV for Channels

(1) In the TV's setup menu, set the mode to"Antenna"or "Air". Refer to the TV manual for detailed instructions.

(2) In the TV Setup menu, set the TV to scan for channels. Sometimes it may be displayed as "Auto Program", "Channel Search", or "Channel Scan". Refer to the TV's user manual for detailed instructions.

(3) If you are about 0-35 miles away from the tower, we recommend you switch the inline amplifier to short range (When yellow light is on).
If you are about over 35 miles away from the tower, we recommend you switch the inline amplifier to long range (When green light is on).

4. If your reception is sporadic or needs to be improved, you can try the following method :

(1) Place the antenna in a higher location.
(2) Face the antenna towards the nearest broadcast tower.
(3) Place the antenna close to or on a window.
(4) Something may be obstructing the signal. moving the antenna and re-scan for channels.

5. How many channels can I receive?

The number of channels you can receive will be determined by what is broadcast in your area.
Signal reception and quality depends on the distance from the broadcast tower to your home.

6. Are all the channels I receive in HD?

Not all digital signals are HD. Make sure you have an HDTV with a built-in ATSC tuner. When connecting the antenna to the HD receiver, make sure it can receive HD signals. Otherwise, you won't be able to watch HD channels.

7. What if I can not receive a signal with antenna?

Surrounding geography and environment may also affect signal strength and reception, including buildings, trees, hills and mountains. The fewer obstructions, the better your chance of receiving strong digital signals. Go to **http://dtv.gov/maps** and enter your zip code to query
